SUMMARY

Software developer with 5 years of experience building REST APIs and third-party integrations in Java and Spring Boot. Experienced in microservices on AWS, test-driven development, and both SQL and NoSQL data stores, delivering scalable, well-monitored services in Scrum teams.

EDUCATION

BSc Computer Science — **Toronto, Ontario**
York University — *Dec 2019*

TECHNICAL SKILLS

Languages: Java, JavaScript, Python
Frameworks: Spring Framework/Boot, React.js, Bootstrap
Cloud & DevOps: Docker, Kubernetes, AWS, Redis
Data & Messaging: MySQL, MongoDB, Apache Kafka

WORK EXPERIENCE

Senior Software Engineer — **Toronto, Ontario**
Sun Life Financial — *Sept, 2025 - Present*

- Led the Java 8 to Java 25 modernization across multiple enterprise applications, redesigning shared architecture to support multi-application workflows and reducing tech debt + security vulnerabilities
- Cut processing latency from 3–7 minutes to ~10 seconds by migrating workloads to OpenShift and eliminating deployment/runtime bottlenecks
- Designed and built a Spring Boot REST API on AWS that automates data collection, replacing a manual process.
- Improved system throughput and reliability by optimizing deployment pipelines and reducing runtime inefficiencies
- Collaborated cross-functionally with product/downstream teams to define requirements and ensure system integration
- Optimized frontend performance by implementing lazy loading and code-splitting in React.js, reducing initial bundle size and improving page load speeds
- Refactored legacy JavaScript code into reusable React functional components and custom hooks, cutting redundancy
- Contributed to architectural decisions around microservices design and deployment strategies

Software Engineer — **Toronto, Ontario**
Sun Life Financial — *April, 2023 - Sept 2025*

- Built and maintained secure, scalable microservices for an enterprise eSign platform using Spring Boot in containerized environments (Docker, Kubernetes)
- Scaled Kafka-based event processing systems to handle 1000s of daily real-time document events with high reliability
- Improved system resilience by implementing retries, idempotency, and monitoring strategies, reducing failures
- Owned end-to-end release cycles (DEV → SIT → PROD), delivering production releases with zero critical defects
- Strengthened CI/CD pipelines and testing strategies to improve deployment confidence and stability

Associate Software Engineer — **Toronto, Ontario**
Sun Life Financial — *March, 2022 - April 2023*

- Delivered full-stack features in an agile environment using Java Spring, contributing to monthly production releases
- Resolved 500+ SonarQube issues, significantly improving code quality, maintainability, and system stability

QA Analyst — **Toronto, Ontario**
Tata Consultancy Services — *April 2021 - Mar 2022*

Junior Applications Support/Developer — **Mississauga, Ontario**
Flynn Group of Companies — *April 2020 - April 2021*
